

TECHNOLOGY BRIEF

STOCKPILING GUIDE

For EZ STREET Cold Asphalt

OVERVIEW

EZ STREET is a high performance cold asphalt that is guaranteed to be permanent. EZ STREET can be stock piled in convenient locations and stored for later use. The stockpiling practices of EZ STREET can have a profound impact on the ease of use and the shelf life of the product. Below is a guideline for the stockpiling and handling of EZ STREET:

BULK STORAGE

- Stockpile height should be a maximum of ten feet high and a minimum of six feet.
- The fresher the stockpile, the easier the workability will be for EZ STREET
- Larger stockpiles, (100-200 tons) stays fresher longer. Smaller stockpiles, (5-50 tons) need to be used within two months.
- Covering large stockpiles of EZ STREET is not necessary, but covering small stockpiles can add to its shelf life.
- **Mixing or turning of stockpiles should be kept to a minimum:** EZ STREET will “crust” on the outer layer of the stockpile; this layer can be thought of as a protective layer. This crust, must be mixed in to rejuvenate the material to make it workable. We have found that the crust can be mixed in every three weeks. However, if EZ STREET is being loaded out, the crust must be mixed in regardless of time spent in pile.

BAG STORAGE

- 1 Ton and 2 Ton, as well as 50 lb. and 35 lb. bags can be stored much longer than bulk.
- We recommend storing bags for less than 6 months if possible, and using them before a winter season (especially if they are stored outside).
- Storing bags outside is acceptable; however, it is important to cover the pallets with black plastic or dark tarps to keep the sun from deteriorating the bags.

The best rule of thumb, is to work out of OUR stockpiles (whether it be bulk or bags) as often as possible to keep EZ STREET fresh and pliable.
